W-CDMA systems are widely criticized for their large spectrum usage, which delayed deployment in countries that acted relatively slowly in allocating new frequencies specifically for 3G services such as the United States. With more bandwidth user requests, a higher level scrambling code is needed from the hierarchy of codes, and more code resources are drawn on. In this mode of operation RLC offers a full acknowledgement of successful delivery. Developed QA reports for cross analysis of network configuration, events and measurements counters. Other information that the USIM holds includes the preferred language to enable the correct language information to be displayed, especially when roaming, and a list of preferred and prohibited Public Land Mobile Networks PLMN. Despite this, services should be accessed in a uniform and easy to understand manner. Others can see my Clipboard. You can help.
